PROFILE

Customer support manager, promoted from the frontline to a 13-person function at a UK fintech in six months. I rebuilt the support operation from the inside — ticket taxonomy, knowledge base, escalation paths and a decision-quality QA model — and treated recurring contact as a signal about upstream failures, not a queue to clear. **Part-time consulting since 2022** on growth, positioning and support for businesses of every size, and **founder** of a live specialist platform.

PROFESSIONAL EXPERIENCE

Support Team Manager

Jul 2024 – Feb 2026

Alpha Capital Group (UK) · Remote · fintech

Promoted after six months on the frontline to manage a 13-person function comprising 10 agents, 2 senior agents and 1 QA specialist, running day-to-day support on Intercom, Discord and email.

- **Rebuilt the ticket taxonomy** to separate the stated reason for contact from the cause found after investigation, plus the affected feature, journey stage, owning department and whether the contact was preventable — replacing four generic buckets that had collapsed product, bank, provider and instruction failures into one reporting bar.
- **Authored the customer-facing knowledge base and FAQ articles**, prioritised by repeat-contact rate, handle time, escalation rate and complaint severity.
- **Specified an in-product withdrawal status timeline** after establishing that the highest-volume contact driver was a visibility failure rather than a delay. Repeat contacts on that driver dropped clearly.
- **Replaced script-adherence QA with decision-quality review**: whether the agent reached correct information, explained it useably, named the next step and recorded the cause. Separated ticket resolution from problem resolution as distinct measures.
- **Redesigned queue routing and priority** on financial impact, customers affected, time sensitivity and compliance risk rather than on contact channel. Defined escalation paths and response standards so ownership of an exception was explicit and answers stayed consistent.
- **Identified and drove the fix for a payment status-mapping defect** in which the provider's "accepted for processing" acknowledgement was recorded as final settlement, so customers were told funds had arrived while still in flight. Assembled the incident evidence, coordinated Payments Operations, Engineering and Finance, and introduced an intermediate status, a monitoring alert and an incident playbook.
- Worked across sales, operations and product on the upstream causes of recurring contact rather than on reply speed.

Customer Support Specialist

Jan 2024 – Jul 2024

Alpha Capital Group (UK) · Remote · fintech

Frontline Arabic-language support for a high-volume customer base. Earned Employee of the Month recognition and hundreds of verified five-star customer reviews, and mapped the recurring contact drivers that became the basis of the management role.

Independent Consultant — Business Growth & Operations

2022 – Present

Part-time, project-based engagements · Egypt

My consulting is a discipline, not an industry: I find where a business is quietly losing money or customers, and fix the cause, not the symptom. I tell founders where they are genuinely different from their competitors, read their buying experience as the customer does, and say when nothing should be built — for organisations from startups to large enterprises. Selected engagement:

- **Diagnosed a mid-size e-commerce operator's "customer service problem" as an operating-model failure.**

Audited the documents rather than the opinions — ad copy, transcripts, cancellation reports, inventory, the fulfilment SOP, carrier reports, every team's KPIs — and found five different delivery promises across advertising, sales, the shipping policy, support's internal rule and the carrier's own clock, none of which agreed.

- **Identified five conflicting delivery promises and three internal definitions of "Confirmed"**, then rebuilt the order journey into unambiguous stages, each with a definition, an owning department, a normal duration, a next action and a named owner when it overran.
- **Introduced three-field problem recording** — the customer's words, the actual cause, the originating stage — which reclassified a share of "customer cancellations" as internal stock errors and located delivery failures occurring before carrier handover.
- **Replaced ticket count as the measure of the problem** with cancellation-after-confirmation, delivery failure, repeat-purchase gaps and stage dwell time, surfacing failures that never produced a complaint. Required advertised operational promises to be validated against stock and carrier capacity before launch.
- **Designed a behaviour-triggered retention offer** shown only to high-intent visitors at exit risk, with frequency controls and margin guardrails, in place of a site-wide discount that would have paid customers who had already decided to buy. Recommended holding acquisition spend where the purchase journey could not sustain it.

Founder — Business Growth, Customer Experience & Platform Operations

2025 – Present

Formula4You · Egypt · part-time venture · specialist commerce platform (live)

Identified a structural gap in Egypt's fragrance market — suppliers, manufacturers, sellers and buyers all operating through general-purpose tools that did not reflect the category's discovery, trust and data requirements — and built the platform for it.

- **Chose a specialist vertical strategy over a generic storefront:** a general store competes on price and delivery, won by whoever spends most, while a category platform competes on relevance.
- **Sequenced launch supply-first** — credible suppliers, data structure, then inventory — holding acquisition spend until the marketplace was worth visiting.
- **Defined the operating model** across onboarding, listing and subscription lifecycles, admin review, content quality, renewals, expired accounts and platform governance — including what happens when a listing is wrong, what a buyer is owed, and who fixes it.
- Translated priorities into phased UX, product, technical, QA and launch requirements, preventing feature bloat during early growth.

CORE SKILLS

Support operations — Ticket taxonomy design · Contact-driver analysis · Repeat-contact reduction · Queue routing and prioritisation · SLA design · Escalation and incident management · Knowledge base and FAQ authoring · QA calibration and decision-quality review · Intercom and helpdesk administration

Leadership & customer experience — Team management and coaching · Coaching and performance review · Standards definition · Cross-department coordination · Customer journey mapping · Conversion and drop-off review · Voice-of-customer analysis · Complaint and de-escalation handling

Operations & process — Process diagnosis · Root-cause analysis · Workflow and journey design · Operating-model definition · SOP and playbook authoring · Service blueprinting · Cross-functional handoff design · Exception and ownership mapping · Impact-effort prioritisation

Analysis & decision — KPI definition and interpretation · Requirements and acceptance criteria · Market and competitor analysis · Cost-benefit and prioritisation analysis

Tools — Intercom · Discord · Text Blaze · Slack · Zendesk · Jira · Odoo · ERP and HR systems · Notion · Trello · Miro · Google Workspace · Microsoft Excel · Google Sheets

Domains — Fintech · E-commerce · Founder-led ventures · Startups to large enterprises

EDUCATION & LANGUAGES

Faculty of Al-Alsun, Ain Shams University — Cairo, Egypt. Undergraduate studies in Languages, two academic years completed.

Languages — Arabic: native. English: professional working proficiency in written business communication; conversational spoken proficiency.
