

AHMED HAMDY

BUSINESS GROWTH & OPERATIONS SPECIALIST

Conversion Strategy | Customer Experience | Process & Product Optimization

Alexandria, Egypt | +20 104 002 0093 | ahmedeldep30@gmail.com

PROFESSIONAL SUMMARY

Business Growth & Operations Specialist with hands-on experience building category-focused digital ventures, improving commercial websites, and redesigning customer and operating journeys. Combines market analysis, customer behavior, conversion-focused UI/UX, process improvement, go-to-market planning, and cross-functional execution to turn business gaps into scalable products and measurable growth opportunities. Has supported founder-led brands, e-commerce businesses, and digital platforms by simplifying purchase decisions, introducing revenue-generating features, improving campaign efficiency, and aligning product, marketing, customer experience, and operations around profitable growth.

SELECTED BUSINESS IMPACT

- Founded and developed a specialized vertical-commerce platform after identifying a structural gap in Egypt's fragrance market.
- Improved conversion-focused UI/UX and purchase journeys across multiple commercial websites, from landing page and product discovery through checkout and retention.
- **Contributed to retail and e-commerce initiatives that collectively generated thousands of completed orders by improving offer structure, conversion journeys, campaign-to-page consistency, and order handling before scaling acquisition spend.**
- Translated customer behavior, recurring objections, and operational friction into practical features, workflows, service improvements, and prioritized execution plans.

CORE EXPERTISE

Business Growth Strategy | Conversion-Focused UI/UX | Customer Journey Optimization | Operating Model Design | Process Improvement | Go-to-Market Planning | Market & Competitor Analysis | Offer & Pricing Strategy | Service & Feature Design | CRO Hypothesis Development | SOPs & Workflow Documentation | KPI & Performance Tracking

PROFESSIONAL EXPERIENCE

FORMULA4YOU

2025 - Present

Founder & Business Growth / Product Operations Lead | Egypt

- Identified a market-wide problem: Egypt's fragrance ecosystem was fragmented across suppliers, manufacturers, sellers, and customers, while general-purpose commerce tools did not reflect the category's discovery, trust, data, and operating needs.
- Validated the opportunity through market mapping, competitor review, and direct domain knowledge, then chose a specialized vertical-platform strategy to create stronger relevance and defensibility than a generic online-store model.
- Built Formula4You as a category-focused commerce platform serving suppliers, manufacturers, stores, and customers through structured business profiles, product discovery, digital storefronts, subscriptions, and trust-oriented content and review controls.
- Designed the growth sequence around supply quality first - onboarding credible suppliers and sellers, improving data structure, and building useful inventory before expanding customer acquisition - to avoid an empty-marketplace problem.
- Defined the commercial and operating model across onboarding, subscription and listing lifecycles, admin review, content quality, renewals, expired accounts, SEO/GEO, and platform governance, converting a market insight into an executable business system.
- Translated business priorities into phased UX, product, technical, QA, and launch requirements, focusing development on high-value user journeys and preventing feature bloat during early growth.

ALPHA CAPITAL GROUP (UK)

2024 - Present

Business Operations & Customer Experience Improvement Contributions | Remote, United Kingdom

- Analyzed recurring patterns from high-volume customer interactions to identify friction in onboarding, service explanations, digital touchpoints, escalation handling, and internal knowledge consistency.
- Converted repeated objections, confusion points, and failure patterns into practical recommendations for clearer journeys, improved communication structures, and more consistent operational handling.
- Prioritized improvement ideas using customer frequency, business impact, retention risk, operational effort, and implementation feasibility, helping connect frontline evidence with business decisions.
- Earned Employee of the Month recognition and more than 300 verified five-star customer reviews, demonstrating strong customer judgment, trust-building, and execution in a high-volume fintech environment.

SELECTED CONSULTING & GROWTH PROJECTS

E-commerce Conversion & UI/UX Optimization | Multi-Product Retail Websites

Conversion audits across mobile and desktop journeys, with emphasis on reducing drop-off and increasing the value of existing traffic before increasing media spend.

- Audited end-to-end customer journeys from advertisement and landing page through navigation, product evaluation, cart, checkout, payment, delivery communication, and post-purchase follow-up; identified unclear hierarchy, unnecessary decisions, weak trust signals, and avoidable form and checkout friction.
- Reorganized page structure and information priority so customers could understand the offer, compare options, verify delivery and payment details, and complete purchases with fewer steps and less cognitive load.
- Designed a behavior-triggered retention mechanism that presents a time-limited, exclusive discount to high-intent visitors showing exit risk after a defined dwell or inactivity threshold, using urgency, frequency controls, and margin guardrails rather than discounting every visitor.
- Strengthened conversion by coordinating CTA hierarchy, social proof, FAQs, trust signals, objection handling, checkout clarity, and follow-up as one connected commercial journey rather than isolated website elements.

Paid Growth, Offer & Funnel Optimization | Apparel and Consumer Product Brands

Commercial improvement projects supporting high-volume retail and e-commerce initiatives that collectively generated thousands of completed orders through tighter alignment between audience, offer, creative, landing experience, and order operations.

- Diagnosed cases where media spend was being scaled before the offer and purchase journey were ready, then shifted the focus from buying more traffic to converting current demand more efficiently.
- Restructured value propositions, bundles, pricing logic, urgency, creative-to-page consistency, customer qualification, order confirmation, and follow-up to improve the economics of each campaign.
- Supported high-volume sales initiatives while maintaining lean acquisition budgets by improving conversion drivers and order handling before increasing daily advertising spend.
- Introduced a practical feedback loop linking campaign questions, abandoned inquiries, customer objections, order outcomes, and creative performance so decisions were based on purchasing behavior rather than reach or message volume alone.

Business Launch & Operating Model Development | Founder-Led Retail and Digital Ventures

From early concept to launch-ready system: customer segment, value proposition, offer, supplier model, operating flow, responsibilities, measurement, and 90-day execution priorities.

- Turned broad business ideas into clear operating models by defining the target customer, core problem, differentiated value proposition, revenue logic, offer architecture, pricing, channels, service delivery, and resource requirements.
- Mapped the complete journey from first awareness to repeat purchase and redesigned internal workflows around structured intake, clear ownership, standardized communication, exception handling, and measurable checkpoints.
- Prevented premature investment in low-value inventory, features, or advertising by prioritizing initiatives according to customer impact, revenue potential, cost, operational complexity, risk, and speed of validation.
- Created phased 30/60/90-day plans that linked marketing, product, operations, content, supplier coordination, and performance measurement into one accountable launch sequence.

METHODS & TOOLS

Methods: Business and market audits | Customer journey mapping | Conversion and UX audits | Process mapping | Root-cause analysis | Impact-effort prioritization | Service blueprinting | CRO hypotheses | Go-to-market roadmaps | SOPs and checklists | KPI scorecards | User stories and acceptance criteria
